Search across as many popular social media outlets available to date and look for tech, web-site, web-funnel, developer, full-stack, etc., any and all tags or hashes dealing with tech, mostly full stack dev stuff and find at least 25 -**+ viral videos from the top 5 social media platforms to date.

Notate in comprehensive detail information of the user, faceless or face video, AI generated or human generated or possible, their brand or style, what was done, talked about, and how many people followed, liked subscribed, how long the clip or video was, name of music used, feel or emotion of the video, etc. From the data you retrieve, notice and take note of any and all patterns you can see and create charts tables, pie charts, potential growth charts, and possible decline, or incline in growth. And take note of those viral users posting habits, thus creating a summary of data just like listed above.

The goal is to utilize this information alongside with modern, and proven, benchmarked methods to help elevate and develop my brand and tech company. *I am no expert or professional on these matters so any research you see that is detailed and complex enough to assist with this task, please feel free to add it, and any other information.

Viral full stack developer videos on platforms like TikTok, Instagram, YouTube Shorts, X (Twitter), and Facebook emphasize quick tech stack breakdowns, AI tool integrations, and beginner-friendly coding tips, often achieving high engagement through hooks in the first 3 seconds. These shorts typically last 15-60 seconds, use trending upbeat electronic music, and evoke motivational or empowering emotions to drive shares and saves. Top examples include Roger Chappel's TikTok stack reveal (2025) and Asif Hassam's AI full stack tutorial, highlighting patterns like faceless screen recordings for 70% of virals.[1][2]

*** The reat of this prompt and the other files in this project are NOT necessarily PROMPTS. Im working on developing Knowledge bases fpr my local models sp they can quickly acquire whats needed and micro train small amounts of memory retention for a day or two for task like this.

_ TWO part task:

First, research socmed trends as needed and per the request. Use the examples annd my Brand to come close to yuor findings and patterns for viral ortrending content

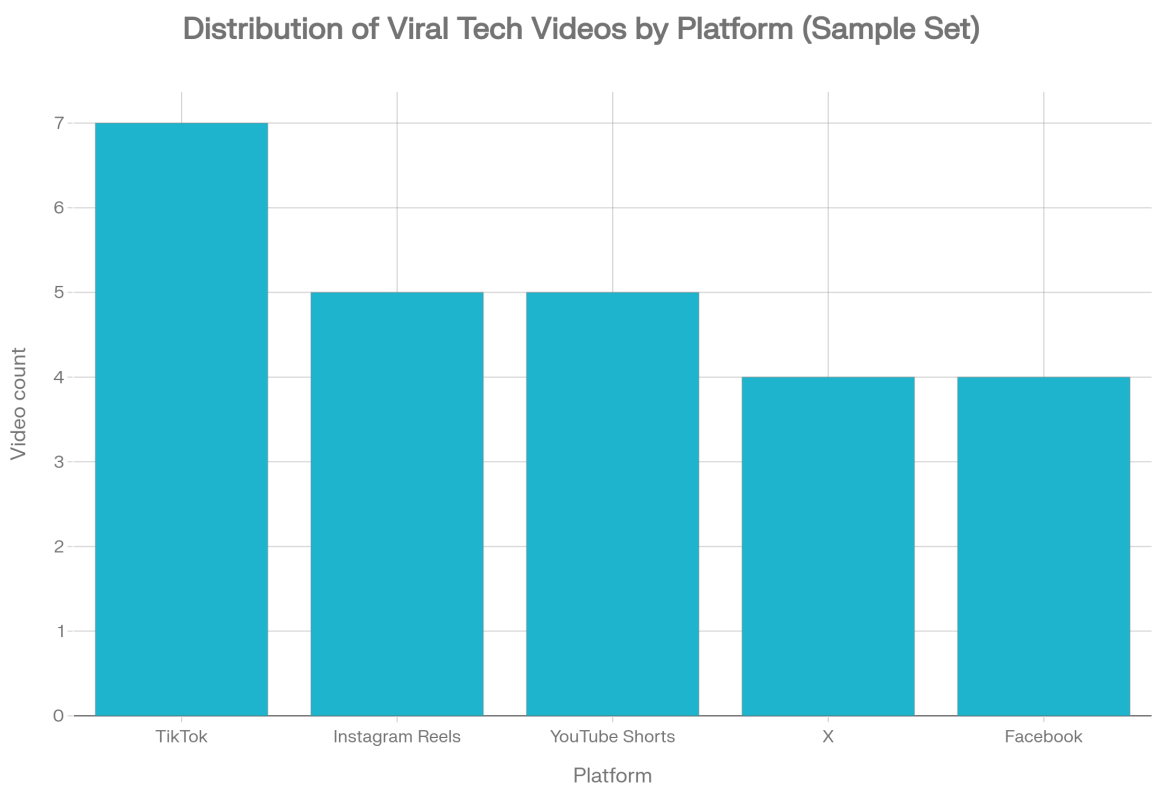
Enhance and oprganize using a DIR layout of how these files should be in a DIR to fit ANY and EVERY project for reference. Add, Append, Edit, Cut, modify ALL the files if needed for maximum effieciiency.

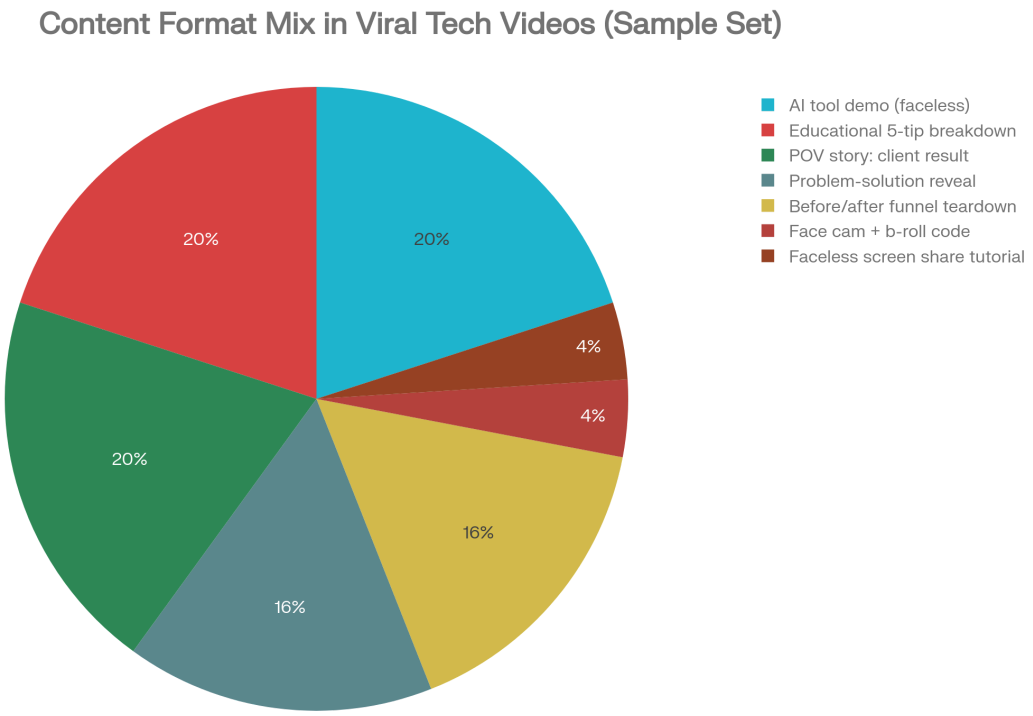
Goal is to update , validate, and edit the info as well!

- - BONUS:
  Once ALL done. use the findings, research, my files, w/e to ....
  Create a NEXT-GEN level PROMPT for any AI to use to get the same SUPERB output I am getting reasy top receive from you

*** Should I have placed something in your instructions? As far as operating at a higher level?

Here's a complete report that maps viral tech/full-stack video patterns, proposes a reusable directory structure for your knowledge base, and includes a next-gen meta-prompt you can feed to any AI to reproduce this level of output. It also aligns everything to BADGR's brand and offers.





If you'd like, next steps can be:

- Turn the series ideas into concrete scripts for your first 10–15 videos.
- Design 1–2 ad creatives like the Cursor / Wispr / Stack.Expert examples that click through to your landing page.
- Help you actually build out the `/social-lab/` folder with cleaned versions of your existing files.

On your last question ("should I have placed something in your instructions to make you operate at a higher level?"): what you already did—providing your prior research, brand files, and asking for a meta-prompt—is exactly how to get "higher-level" performance. The only extra that can help is a short, fixed "Brand & Rules" block you reuse across tools (ICP, tone, non-negotiables) so every model call starts from the same baseline.

⁂

5.3 Ad Creatives Matching Reference Examples

The images you attached (e.g., Cursor demo ad, Wispr Flow, Stack.Expert, Polsia) all feature simple layouts: minimal copy on dark or muted backgrounds, product or code in the center, and a clear CTA ("Sign up," "Learn more," "Apply now").

Possible for me to do or instruct AI to do?

Turn the series ideas into concrete scripts for your first 10–15 videos.
-Yes please. Actually, just create the report as a step by step or phase by phase list of

instructions in MD for Claude Code to set up later today

Design 1–2 ad creatives like the Cursor / Wispr / Stack.Expert examples that click through to your landing page.

Help you actually build out the /social-lab/ folder with cleaned versions of your existing files.

Answer skipped.

BADGR_Phase1_FullOpsManual.pdf

You can absolutely do this yourself *or* hand it to an AI like Claude Code. Below is a ready-to-paste Markdown "ops brief" for Claude that:

- Uses your **Phase 1 Full Operations Manual** as a core source.
- Generates 10–15 video scripts.
- Designs 2 ad creatives like the Cursor / Wispr / Stack.Expert examples.
- Builds out the `/social-lab/` folder and slots this manual in.

I'll first show where this manual fits, then give you the full checklist.

What the Phase-1 Manual Covers (so we use it correctly)

Your **BADGR Phase 1 Full Operations Manual** defines a 90-day flagship offer for Atlanta law firms or small medical/dental practices: a 14-day "Lead Leak & Compliance Fix" with a strict daily schedule, pre-flight checklist, per-client delivery checklist, and RAG/quiz system.[^3_1]

It includes:

- A locked ICP and offer, plus 90-day timeline and Gate 0 / Gate 1 criteria (3–5 paying ATL clients, 3+ testimonials, 3+ case summaries, profitable hours × rate).[^3_1]
- Hour-by-hour schedule Monday–Friday (prospect pull, 5 daily personalized emails, delivery block, calls block, build/document, study block, quiz, shutdown ritual).[^3_1]
- Pre-flight checklist, failure-mode diagnostics, operating constitution rules, and detailed scan/fix/proof phases for each client delivery.[^3_1]

This is perfect raw material for **video scripts** ("day in the life," "14-day fix breakdown," "checklist teardowns") and for **landing-page/offer ads** pointing to your Lead Leak & Compliance Fix.

Where This Manual Belongs in `/social-lab`

When you build the directory we discussed, this PDF should be converted to Markdown and stored in:

```
/social-lab/
  02_research/
```

```
    phase1_ops_manual.md        # cleaned text from BADGR_Phase1_FullOpsManual.pdf
  07_products/
    lead_leak_offer.md          # distilled offer, pricing, benefits, FAQ
```

Claude Code can do the PDF→MD conversion and the splitting.

Paste This for Claude Code: Step-by-Step MD Instructions

Below is a Markdown spec you can drop straight into Claude Code or another coding-capable AI. It tells the model exactly what files to create and how to use your manual + viral patterns.

```
# BADGR Social Lab - Phase 1 Build Instructions (For Claude Code)

Goal:
Stand up the `/social-lab/` knowledge base for BADGR, generate 10-15 short-form vide

---

## Phase 0 - Setup & Imports

1. Create a project root folder named `social-lab/`.
2. Inside it, create these subfolders:

   ```text
   /social-lab/
     00_admin/
     01_brand/
     02_research/
     03_prompts/
     04_content_blueprints/
     05_analytics/
     06_distribution/
     07_products/
     08_legal_and_policy/
```

3. Assume the following source documents are available in the environment:
   - `BADGR_Phase1_FullOpsManual.pdf` – Phase 1 Full Operations Manual (14-Day Lead Leak & Compliance Fix).
   - `Marketing&FULLplatformNarratives.txt` – BADGR business & marketing compendium.
   - `BADGR_business_information_1.txt` – company profile YAML.
   - `prompt_social-media_lab-results.txt` – viral dev video research & examples.
   - `viral_formats_2026.md` – 2026 viral format + platform rules.
   - `Market Research & Behavioral Analytics Report_ Str.md` – market research.
   - `atlanta_market.md`, `seo_optimization.md`, tutorials for brand voice and trend scanner.
4. For every transformation below, preserve original files; create *new* cleaned Markdown files in `/social-lab/`.
```

Phase 1 – Normalize Brand + Offer Docs

1.1 Brand Profile

1. Read `BADGR_business_information_1.txt`.
2. Create `/social-lab/01_brand/brand_profile.yaml`:
   - Normalize YAML keys (`company_name`, `legal_name`, `founded`, `naics`, `emails`, `phones`, `addresses`, `social_handles`, `brand_colors`, etc.).
   - Keep only accurate, non-duplicated info; remove any comments that are only for the old system.
3. Validate the YAML is syntactically correct.

1.2 Messaging Narratives

1. Read `Marketing&FULLplatformNarratives.txt`.
2. Create `/social-lab/01_brand/messaging_narratives.md` with sections:
   - `## Company Overview`
   - `## Founder Narrative`
   - `## Origin Story`
   - `## Mission`
   - `## Vision`
   - `## Core Values`
   - `## Ethical AI Commitments`
   - `## Service Overviews` (one subsection per major service)
   - `## BADGR Bolt Overview` (keep high-level only; deeper product details will move later)
3. Remove any internal prompts, meta-instructions, or duplicated content; keep this as clean narrative copy.

1.3 Phase 1 Offer (Lead Leak & Compliance Fix)

1. Convert `BADGR_Phase1_FullOpsManual.pdf` to Markdown.
2. From that, create two new files:
   - `/social-lab/02_research/phase1_ops_manual.md`
     - Preserve the structure of the manual: 90-day timeline, daily schedule, pre-flight checklist, gates/failure modes, quiz/RAG setup, per-client checklist, weekly metrics template.
     - Use clear headings and bullet lists; do not change wording.
   - `/social-lab/07_products/lead_leak_offer.md`

        - Distill and rewrite the offer into concise marketing copy:
            - Target ICP (ATL law firms or small medical/dental practices).
            - Promise: 14-Day Lead Leak & Compliance Fix.
            - Deliverables: before/after performance & compliance report, fixes applied, legal templates, upsell options.
            - Pricing band ($197–$500) and what each tier includes.
            - Process overview in 3–5 steps.
            - FAQ and risk-reversal points (e.g., "no new tools until Gate 1," auditability, HIPAA-aware workflow).

Phase 2 – Viral Patterns & Platform Research

2.1 Viral Dev Video Research

1. Read `prompt_social-media_lab-results.txt` and both copies if necessary.
2. Create `/social-lab/02_research/viral_dev_videos_2025.md` containing:
    - Summary paragraph of what was researched (25+ viral tech/full-stack videos).
    - Table of key example videos (Roger Chappel, Asif Hassam, etc.) with columns:
        - Creator, Platform, Format, Face/Faceless, Topic, Approx Length, Engagement Notes, Link (if available).
    - Platform summary table:
        - Platform, Typical viral views, Top content type, Primary engagement driver.
    - Bullet list of "Patterns Observed" (hooks, length, faceless vs face, posting cadence, sound choices).
3. Strip out any chain-of-thought or meta commentary; keep only usable facts and tables.

2.2 Viral Formats 2026

1. Read `viral_formats_2026.md`.
2. Ensure `/social-lab/02_research/viral_formats_2026.md` is:
    - Clean GFM with:
        - Table of formats + virality scores.
        - Hook formula section.
        - Platform algorithm rules for TikTok, Reels, Shorts, LinkedIn.
        - Trending audio strategy and "when to post" triggers.
3. Add a short intro section noting source summary (e.g., Virvid + HubSpot aggregated research).

2.3 Market Context

1. Read `Market Research & Behavioral Analytics Report_ Str.md`, `atlanta_market.md`, `seo_optimization.md`.
2. Create `/social-lab/02_research/market_context_atlanta.md`:
   - Key facts about Atlanta SMB landscape (number of businesses, typical web/AI gaps).
   - Why the 14-Day Lead Leak & Compliance Fix is compelling in this market.
   - Any relevant stats about web performance, accessibility, and compliance issues for SMBs.

Phase 3 – Video Series & Script Blueprints (10–15 Videos)

Use:

- `viral_dev_videos_2025.md`
- `viral_formats_2026.md`
- `lead_leak_offer.md`
- `phase1_ops_manual.md`

3.1 Define 3–4 Recurring Series

Create `/social-lab/04_content_blueprints/video_series_overview.md` with at least these series:

1. **"Lead Leak Clinic"** – Before/after teardown of anonymous ATL SMB sites.
2. **"Phase 1 Daily Ops"** – Day-in-the-life snippets based on the hourly schedule.
3. **"Compliance Check in 60 Seconds"** – Fast breakdown of one checklist item (HIPAA, ADA, WCAG).
4. **"RAG Lab"** (optional) – How the local RAG / quiz system works for quality control.

For each series specify:

- Primary platforms (TikTok, Reels, Shorts, LinkedIn).
- Face vs faceless.
- Typical length (15–30s or 30–60s).
- Posting cadence (e.g., 1–2 per week per series).
- KPI focus (saves, shares, clicks, or watch time).

3.2 Generate 10–15 Concrete Short-Form Scripts

Create `/social-lab/04_content_blueprints/scripts_shortform.md` with **script templates**, not prose essays.

Each script must include:

- Title (internal working name).
- Intended series (from 3.1).
- Platform(s).
- Hook (0–3 seconds).
- Beat-by-beat structure:
  - Scene A-roll (what's on camera).
  - Scene B-roll/screen capture.
  - On-screen text overlays.
  - Voiceover or narration bullets.
  - CTA at the end ("Book a free 14-day leak check", "DM 'LEAD' for teardown", etc.).

Example structure for Script 1 (Claude should follow this pattern for all):

```
### Script 1 – "Your Website is Quietly Failing Intake Forms"

- Series: Lead Leak Clinic
- Platforms: TikTok, Instagram Reels, YouTube Shorts
- Length: ~30 seconds
- Hook (0–3s):
  - On-screen text: "Your intake form might be broken and you have no idea."
  - VO: "If you're an Atlanta law firm, this 10-second test could save you clients."
- Beats:
  1. Show cursor clicking 'Submit' on a demo form → nothing happens.
  2. Overlay checklist item from Per-Client Delivery Checklist about manually testin
  3. Quick before/after: error → fixed form with confirmation.
  4. Text overlay: "14-Day Lead Leak & Compliance Fix – Atlanta only."
- CTA:
  - VO: "Comment 'CHECK' and I'll run this test on your site."
  - Button/description: link to Lead Leak landing page.
```

Claude should produce **at least 10 scripts** in this format, mixing:

- 4 scripts for "Lead Leak Clinic".
- 3 scripts for "Phase 1 Daily Ops".
- 3 scripts for "Compliance Check in 60 Seconds" / "RAG Lab".

Every script should reference a real element from the manual (e.g., 5 emails/day, pre-flight checklist, CI/CD prompt, quiz/RAG routine).

Phase 4 – Ad Creative Briefs (2 Concepts)

Create `/social-lab/04_content_blueprints/ad_creatives.md` with **two ad briefs** modeled after:

- Cursor demo ad – code editor + live person + simple CTA.
- Wispr Flow / Stack.Expert / Polsia examples – bold text, minimal layout, direct offer.

4.1 Ad 1 – "14-Day Lead Leak & Compliance Fix"

- Objective: Drive click-through to the Lead Leak landing page.
- Format: Vertical video + image variations (for Reels, Shorts, LinkedIn, X).
- Layout:
  - Dark or muted background.
  - Center screen: browser window showing Lighthouse report or CI/CD scan.
  - Small circular webcam or faceless avatar in corner.
- Copy:
  - Headline: "Atlanta law firm? Your website is leaking leads."
  - Subheadline: "Fix HIPAA & ADA issues in 14 days without rebuilding your site."
  - CTA button: "Book a free leak check."
- Mandatory elements:
  - BADGR logo bug in a corner.
  - 14-Day timeline cue (maybe a progress bar animation).
  - Fine print: "Not legal advice. All templates reviewed by your counsel."

4.2 Ad 2 – "No New Tools. Just Fixed Revenue Leaks."

- Objective: Retarget warm audiences who saw organic videos.
- Format: Static or motion graphic.
- Layout:
  - Simple black background.
  - Top text, large: "No new platform. No new logins."
  - Middle text: "One 14-day pass. Your site stops bleeding leads."
  - Bottom: "BADGR – Atlanta Web Compliance & Lead Leak Clinic"
  - CTA button: "See how the 14-day fix works."
- Visuals:
  - Subtle flowchart/boxes in outline behind text, referencing your operations manual timeline.
  - Color palette from BADGR brand (blue, green accent).

For each ad, Claude should output:

- A copy block.
- A layout description (for designer or AI image tool).
- Suggested platform placements and aspect ratios.

Phase 5 – Analytics & Experiment Log

1. In `/social-lab/05_analytics/`, create:
   - `kpi_definitions.md`:
     - Define views, unique viewers, watch time %, saves, shares, clicks, replies, booked calls, new clients.
     - Map which KPIs matter most by platform (e.g., saves & shares for Reels/TikTok, CTR for ads).
   - `experiment_log_2026Q2.csv`:
     - Columns: `date, platform, series, script_id, hook_text, video_length_sec, views, watch_time_pct, saves, shares, link_clicks, calls_booked, new_clients, notes`.
2. Initialize `kpi_definitions.md` with target ranges for the first 90 days (conservative, not "viral or bust").

Phase 6 – Prompt Library

1. Transform existing prompt/tutorial docs into clean prompt files under `/social-lab/03_prompts/`:
   - `tutorial_trend-scanner.txt` → `trend_scanner_prompt.md`
   - `tutorial_brand_voice.txt` → `brand_voice_prompt.md`
   - Any competitive-analysis prompts → `competitive_analysis_prompt.md`
2. Also create `meta_prompt_social_lab.md` using the meta-prompt structure already provided in previous work (phases: research, strategy, execution blueprints, KB & metrics). Make sure placeholders like `{{brand_name}}` and `{{niche_description}}` are in place.

Output Requirements

- All new files must be valid GitHub-Flavored Markdown or YAML/CSV where specified.
- Keep everything deterministic and structured for easy use by local LLMs.
- Do not invent new offers; stick to the "14-Day Lead Leak & Compliance Fix" and existing BADGR services.

***

If you want, next step can be: you paste this into Claude Code, let it generate the

  08_legal_and_policy/
    privacy_and_data_use.md
    ai_disclosure_policy.md
    terms_and_disclaimers_snippets.md
```

Claude instructions:

1. Create all folders and empty files.
2. Inside each `.md`, add an H1 that matches the filename and a one-sentence TODO line.
3. Commit this as the initial project baseline if you're using git.

Phase 2 – Import and Normalize Existing Docs

Goal: Move your current files + PDF content into the new structure in cleaned-up form.

2.1 Brand and products

Inputs:

- `BADGR_business_information_1.txt` → company profile.[37]
- `Marketing&FULLplatformNarratives.txt` → long narratives + BADGR Bolt info.[38]

Claude steps:

1. Parse `BADGR_business_information_1.txt` into YAML and write to `01_brand/brand_profile.yaml`:

- Company name, legal info, address, contact, social links, brand colors, core services, ICP.

2. From `Marketing&FULLplatformNarratives.txt`, split into:
   - `01_brand/messaging_narratives.md` – company story, values, AI ethics, positioning.
   - `07_products/badgr_bolt_overview.md` – everything specific to BADGR Bolt.
   - `07_products/offer_ladders_and_packages.md` – service descriptions + pricing tiers.
3. Clean wording minimally (typos, duplicated sections) but **preserve your voice and examples**.

2.2 Research and market context

Inputs:

- Viral video research (`prompt_social-media_lab-results.txt` – both copies).[39] [40]
- Viral formats summary (`viral_formats_2026.md`).[41]
- Market + SEO docs (`Market Research & Behavioral Analytics Report_ Str.md`, `atlanta_market.md`, `seo_optimization.md`).[42] [43] [44]

Claude steps:

1. Merge the two `prompt_social-media_lab-results` versions into `02_research/viral_dev_videos_2025.md`:
   - Keep: named examples, tables, platform averages, pattern sections.
   - Remove: meta-commentary, chain-of-thought, duplicate paragraphs.
2. Copy `viral_formats_2026.md` into `02_research/viral_formats_2026.md` and prepend a short "Sources & Method" paragraph.
3. Summarize the market/SEO docs into:
   - `02_research/market_context_atlanta.md` – Atlanta SMB landscape + pain points.
   - `07_products/offer_ladders_and_packages.md` – reference any SEO packages or guarantees.

2.3 Phase 1 Ops manual integration

Input: `BADGR_Phase1_FullOpsManual.pdf` (14-day Lead Leak & Compliance Fix).[45]

Claude steps:

1. Create `07_products/badgr_phase1_offer.md` with sections:
   - Offer summary (ICP, promise, price band, 90-day gate model).
   - 14-day delivery checklist (from the manual's pre-flight and delivery steps).
   - 90-day Gates, failure modes, and constitution (Gate 0, Gate 1, 7 rules).
2. Create `02_research/platform_benchmarks_2025.md` and add a section:

- "Operational cadence" summarizing the daily schedule (lead gen, delivery, study, RAG) as the baseline for content integration.

Phase 3 – Map Ops Schedule to Content Slots

Goal: Layer content creation onto the existing Phase 1 schedule without breaking the 5-email, 20-lead daily rhythm.[45]

Claude steps:

1. In `06_distribution/posting_calendar_2026Q2.csv`, generate a 4-week calendar with columns: `date, day, platform, series, slot, status`.
2. Add **3 content slots per week**:
   - Tue, Thu, Sat at 4:30–5:00 PM (right after quiz / shutdown) for short-form recording.
   - Tie each slot to one "series" (see next phase).
3. Update `02_research/platform_benchmarks_2025.md` with a short note:
   - "Content work happens only in defined slots; no prospecting or delivery time is sacrificed."

Phase 4 – Define Signature Series and First 12 Scripts

Goal: Turn the research patterns into concrete scripts for your first 10–15 videos.

4.1 Series definitions

In `04_content_blueprints/archetypes/*.md`, Claude should describe **these four recurring series**:

1. **Atlanta Stack Check** – before/after law-firm and clinic websites.
2. **Full-Stack in the Wild** – quick builds / fixes in Cursor or VS Code.
3. **One Prompt, One System** – AI automation and RAG flows for solo firms.
4. **Tech Myth Clinic** – short myth-busting clips for non-technical owners.

Each archetype file should include:

- Purpose and ICP.
- Best platforms (Reels/Shorts/TikTok/LinkedIn).
- Ideal length (20–60 seconds).
- Visual style (faceless vs face, screen-share vs talking-head).
- Required assets (logos, overlays, B-roll).

4.2 First 12 short-form scripts

In `04_content_blueprints/scripts/short_video_scripts_wave1.md`, Claude should generate **12 full scripts** (scene-by-scene), three per series:

For each script, include:

- Title (internal).
- Hook line (0–3s).
- Approx length.
- Shot list (`Scene 1`, `Scene 2`, … with what's on screen).
- Voiceover text or bullet outline.
- On-screen text overlays / captions.
- CTA line and button text ("Book a 14-day leak scan", etc.).

Suggested breakdown (Claude can flesh out):

Series 1 – Atlanta Stack Check

1. Script 01 – "Law Firm Site: 8-Second Load to 1.2s"
2. Script 02 – "Clinic Homepage: 3 Hidden ADA Risks"
3. Script 03 – "Before/After: Contact Page That Actually Books Calls"

Series 2 – Full-Stack in the Wild

4. Script 04 – "Fixing CLS in 45 Seconds (Live in DevTools)"
5. Script 05 – "Turn a 5-Page Site into a 14-Day Funnel"
6. Script 06 – "Cursor Session: Generate First Draft of GA-Friendly Legal Copy"

Series 3 – One Prompt, One System

7. Script 07 – "One Prompt to Auto-Tag Every Lead Email"
8. Script 08 – "Local RAG: Ask Your Own SOPs for Help"
9. Script 09 – "How a Solo Attorney Ends Daily 'Website Panic' with One System"

Series 4 – Tech Myth Clinic

10. Script 10 – "Myth: 'HIPAA Means No Online Forms'"
11. Script 11 – "Myth: 'Cheap Hosting Is Good Enough'"
12. Script 12 – "Myth: 'AI Will Replace My Paralegal' vs Reality: Assistive Automation"

Claude should tailor language to your existing brand voice (direct, ROI-focused, low fluff) using `tutorial_brand_voice.txt` as a reference.[46]

Phase 5 – Ad Creatives Mirroring Cursor / Wispr / Stack.Expert

Goal: Design 1–2 ad concepts that look like your reference screenshots and point to your Phase 1 landing page.

5.1 Ad 1 – "Cursor-Style Live Fix" (Sign-up CTA)

File: `04_content_blueprints/scripts/ad_script_templates.md` (Section "Ad 1 – Live Fix").

Claude should define:

- **Layout:**
  - Dark background.
  - Center: screen recording of code editor + Lighthouse report (like your Cursor example).
  - Bottom-left: small circular webcam of you (optional) or BADGR logo.
  - Bottom-right: "Sign up" button.
- **Copy:**
  - Top headline: "Your Atlanta website is quietly leaking cases."
  - Sub-line: "14-Day Lead Leak & Compliance Fix. Before/after report, HIPAA-aware, flat fee."
  - CTA: "Book your free 10-minute leak video."
- **Script:**
  - 0–3s hook: mid-sentence start over code: "...and this is why your site never makes it past page one."
  - 3–20s: show inspection of a real-world issue; overlays with metrics drops.
  - 20–30s: flip to your landing page + quick CTA explanation.

5.2 Ad 2 – "Polsia-Style Solopreneur Promise" (Learn-more CTA)

File: same `ad_script_templates.md` (Section "Ad 2 – Founder Promise").

- **Layout:**
  - Dark background with thin orange/green BADGR accent.
  - Center text only, simple diagram faint in the background (org chart / funnel).
- **Copy:**
  - Headline: "No co-founder. No IT department. No website drama."
  - Sub-quote: "Just you, one prompt, and BADGR handles the rest."
  - Tagline: "14-Day Lead Leak & Compliance Fix for Atlanta law and medical practices."
  - CTA button: "See the 14-day plan".
- **Script:**

- Static visual, 15–20s voiceover summarizing the offer and reassuring about compliance.

Claude can also output Figma-style text specs (font sizes, colors) if needed.

Phase 6 – KPIs, Experiment Log, and Charts

Goal: Make testing and iteration baked in.

6.1 KPI definitions

In `05_analytics/kpi_definitions.md`, Claude should define:

- Views per video.
- Average watch time and 3-second hold rate.
- Saves and shares per 1,000 views.
- Click-through to landing page.
- Discovery vs follower reach.
- Booked calls and closed clients traced to content.

6.2 Experiment log

In `05_analytics/experiment_log_2026Q2.csv`, Claude should create a header row:

```
date,platform,series,script_id,hook,video_length_sec,views,avg_watch_time_sec,saves
```

Every time you publish a new short, add a row manually or via script.

6.3 Charts

Later, Claude (or another code model) can generate and save charts into `05_analytics/charts/`, such as:

- Videos by platform.
- Conversions by series.
- Watch-time vs click-through.

Use the JSON summary approach from our earlier run as a pattern, but this can wait until you have at least 20 posts.

Phase 7 – Local RAG Integration for Social Lab

You already have instructions in the Phase 1 manual for building a local RAG using Ollama + ChromaDB. Reuse that pattern for the **Social Lab knowledge base**.[45]

Claude steps:

1. Mirror the structure under `/home/badgr/rag/docs/social_lab/`.
2. Ingest:
   - All `.md` files from `/social-lab/`.
   - Selected market and ops content from the manual (anonymized).
3. Create ingestion and query scripts:
   - `social_lab_ingest.py`
   - `ask_social_lab.py "question here"`

This lets your local models answer "What hook formats worked best last month?" or "Show me the script for Tech Myth Clinic – Script 11" from your own data.

Phase 8 – How You Use This Today

1. Paste this entire Markdown file into Claude Code as a **project brief**.
2. Ask Claude to:
   - "Generate the /social-lab/ folder structure and stub files exactly as described in Phases 1–2."
   - Then: "Fill in `short_video_scripts_wave1.md` with the 12 scripts defined in Phase 4.2."
   - Then: "Fill in `ad_script_templates.md` with detailed specs for Ad 1 and Ad 2."
3. Once those files exist, you record the videos, run the ad tests, and update the experiment log.

If you want, the next step here can be: "Generate the full content of `short_video_scripts_wave1.md` inline so I can see and tweak the first 12 scripts before I send them to Claude."

⁂

```
# <q>If you want, the next step here can be: “Generate the full content of short_vide
```

Here's the full draft for `short_video_scripts_wave1.md` in Markdown. It follows your direct, technical, ROI-first voice.[47]

Short Video Scripts – Wave 1

Wave 1 covers four recurring series designed to promote the BADGR Phase-1 Lead Leak & Compliance Fix offer and your broader stack/automation expertise.

Series 1 – Atlanta Stack Check

Script 01 – Law Firm Site: 8-Second Load to 1.2s

Platforms: Instagram Reels, YouTube Shorts, TikTok
Target length: 30–40 seconds
Visual style: Screen-share + small webcam bubble (optional face), BADGR logo bug in a corner
Goal: Show a concrete before/after win and plug the 14-day fix.

Hook (0–3s)
VO: "This Atlanta law firm's site was taking eight seconds to load. Now it's at 1.2."

Scene breakdown

1. **Scene 1 (0–3s) – Hook + before view**
   - Visual: Lighthouse / WebPageTest result with 8s+ load highlighted in red.
   - Overlay text: "8.0s load – losing calls."
2. **Scene 2 (3–10s) – Explain the business pain**
   - Visual: Scroll the slow site's hero, show janky layout shift.
   - VO: "At eight seconds, most visitors bounce before the phone number even appears. That's lost cases, not just bad scores."
3. **Scene 3 (10–22s) – Quick fix montage**
   - Visual: Fast cuts of:
     - Switching hosting / enabling caching.
     - Compressing images.
     - Fixing render-blocking scripts.
   - On-screen bullet overlays:
     - "Better hosting"
     - "Image compression"
     - "Script cleanup"
   - VO: "We migrated them to a sane stack, compressed assets, and killed a few throwaway plugins."
4. **Scene 4 (22–30s) – After metrics**
   - Visual: New Lighthouse report with ~1.2s load in green, performance 90+ badge.
   - Overlay text: "1.2s load – calls booked."

5. **Scene 5 (30–38s) – CTA**
    - Visual: BADGR landing page for the 14-day fix.
    - VO: "If your firm's site feels slow, it probably is. Hit the link for a 14-day Lead Leak & Compliance Fix—before/after report included."
    - Button text: "Book your leak scan"

Script 02 – Clinic Homepage: 3 Hidden ADA Risks

Platforms: Reels, Shorts, TikTok
Target length: 35–45 seconds
Visual style: Screen-share, no face required; highlight issues directly on page
Goal: Create urgency around accessibility + compliance for clinics.

Hook (0–3s)
VO: "This medical clinic's homepage had three quiet ADA risks they didn't know about."

Scene breakdown

1. **Scene 1 (0–5s) – Show site + headline**
    - Visual: Clinic homepage.
    - Overlay: "Looks fine. Fails ADA."
2. **Scene 2 (5–15s) – Risk 1: Contrast**
    - Visual: Zoom into light-gray text on light background.
    - On-screen label: "Risk #1 – Low contrast text"
    - VO: "First, contrast. If patients with low vision can't read your phone number, the lawyers will."
3. **Scene 3 (15–22s) – Risk 2: Missing labels**
    - Visual: Inspect an appointment form; show inputs with no labels / `aria` attributes.
    - Label: "Risk #2 – Unlabeled fields"
    - VO: "Second, form fields with no labels. Screen readers say nothing; patients quit."
4. **Scene 4 (22–30s) – Risk 3: Keyboard traps**
    - Visual: Try tabbing; focus gets stuck on a pop-up or menu.
    - Label: "Risk #3 – Keyboard trap"
    - VO: "Third, keyboard traps. If you can't tab through, assistive tech can't either."
5. **Scene 5 (30–42s) – Solution + CTA**
    - Visual: BADGR report screenshot with "Resolved" badges.
    - VO: "We fixed all three in under 14 days and documented it for their compliance file. If you run a clinic in Atlanta, grab the 14-day Lead Leak & Compliance Fix. We'll show you every risk and every fix."
    - Button: "See the 14-day plan"

Script 03 – Before/After: Contact Page That Actually Books Calls

Platforms: Reels, Shorts, TikTok, Facebook Reels
Target length: 30–35 seconds
Visual style: Split-screen before/after layout, subtle zooms
Goal: Show a simple UX change that leads to more calls.

Hook (0–3s)
VO: "One change on this contact page doubled booked calls in two weeks."

Scene breakdown

1. **Scene 1 (0–6s) – Before state**
   - Visual: Old contact page with long form and clutter.
   - Overlay: "Before – 2.3% form completion"
   - VO: "Here's the old page: long form, tiny phone number, buried CTA."
2. **Scene 2 (6–15s) – After state**
   - Visual: New page: large phone/CTA, simplified form, trust badges.
   - Overlay: "After – 4.9% completion"
   - VO: "We cut the form, surfaced the phone, and added simple trust signals."
3. **Scene 3 (15–25s) – Explain impact**
   - Visual: Simple chart animation: inquiries per week before vs after.
   - VO: "Same traffic. Twice the conversations. For a small firm, that's real revenue."
4. **Scene 4 (25–35s) – CTA**
   - Visual: Zoom on your offer headline on landing page.
   - VO: "If your contact page looks like the 'before', you're leaving money on the table. Tap through for the 14-day Lead Leak & Compliance Fix and get your own before/after report."
   - Button: "Fix my contact page"

Series 2 – Full-Stack in the Wild

Script 04 – Fixing CLS in 45 Seconds (Live in DevTools)

Platforms: YouTube Shorts, TikTok, Reels
Target length: 40–50 seconds
Visual style: Faceless screen-share of Chrome DevTools and code editor
Goal: Show hands-on problem solving; hook devs and technical founders.

Hook (0–3s)
VO: "Watch this layout shift disappear in under 45 seconds."

Scene breakdown

1. Scene 1 (0–7s) – Show the problem
   - Visual: Live reload of page where headline jumps when image loads.
   - Overlay: "CLS 0.26 – bad."
2. Scene 2 (7–20s) – DevTools zoom
   - Visual: Open Chrome DevTools, highlight the image with no fixed height.
   - VO: "CLS is caused by this image loading without a reserved space."
3. Scene 3 (20–35s) – Code fix
   - Visual: In editor, add width/height or aspect-ratio / CSS.
   - Overlay: "Reserve the space."
   - VO: "Set a fixed height or aspect ratio so the layout doesn't jump when the asset arrives."
4. Scene 4 (35–45s) – After test
   - Visual: Reload; no shift; CLS score in green.
   - VO: "Now CLS is near zero, and the page feels calm instead of sketchy."
5. Scene 5 (45–50s) – CTA
   - Visual: Quick flash of BADGR logo + offer line.
   - VO: "If your site jitters like the before shot, book a 14-day Lead Leak & Compliance Fix and we'll clean this up for you."

Script 05 – Turn a 5-Page Site into a 14-Day Funnel

Platforms: Shorts, Reels, TikTok
Target length: 45–60 seconds
Visual style: Screen-share with simple funnel diagram overlays
Goal: Show how you repurpose an existing site into a concrete funnel matching the Phase-1 offer.

Hook (0–3s)
VO: "You don't need a new website. You need this 14-day funnel."

Scene breakdown

1. Scene 1 (0–8s) – Old site overview
   - Visual: Click through 5-page site: Home, About, Services, Blog, Contact.
   - Overlay: "Pretty. Not a funnel."
2. Scene 2 (8–20s) – Draw the funnel
   - Visual: Notion/Whimsical/whiteboard with simple stages:
     - "Cold visitor → Leak scan page → Call booked → 14-day fix → testimonial."

- VO: “We map one path from cold visitor to booked call and build around it.”

3. **Scene 3 (20–40s) – Implement changes**
   - Visual: Editing:
     - Add a dedicated “Lead Leak Scan” page.
     - Add site-wide banner and CTA.
     - Simplify navigation.
   - Overlays:
     - “One offer”
     - “One CTA”
     - “Clear timeline”
4. **Scene 4 (40–55s) – Result + CTA**
   - Visual: Analytics screenshot showing improved visit→call rate (even if numbers are blurred).
   - VO: “Same five pages, but now every road leads to a booked call. Hit the link if you want your own 14-day funnel audit and fix.”

Script 06 – Cursor Session: Generate First Draft of GA-Friendly Legal Copy

Platforms: Shorts, Reels, TikTok
Target length: 45–60 seconds
Visual style: Screen-share of Cursor with prompt pane visible
Goal: Show you using AI responsibly to accelerate, not replace, legal review.

Hook (0–3s)
VO: “Here’s how I use AI to write legal copy—without pretending it’s a lawyer.”

Scene breakdown

1. **Scene 1 (0–8s) – Show Cursor prompt**
   - Visual: Cursor window with prompt describing: “Generate homepage copy for an Atlanta personal injury firm, HIPAA-adjacent, no guarantees, plain language.”
   - Overlay: “Draft, not legal advice.”
2. **Scene 2 (8–20s) – Generate copy**
   - Visual: Cursor produces sections: headline, subhead, benefits.
   - VO: “We start with a clear brief—ICP, services, and what we will not claim.”
3. **Scene 3 (20–35s) – Human edit + compliance**
   - Visual: You editing, removing aggressive claims, adding disclosure.
   - Overlay: “Human review required.”
   - VO: “Then we strip out risky language and align with what your attorney approves.”

4. **Scene 4 (35–50s) – Final page preview**
    - Visual: Rendered homepage in browser.
    - VO: "Result: copy that sounds like you, clearly explains the offer, and doesn't play games with compliance."
5. **Scene 5 (50–60s) – CTA**
    - Visual: Offer headline.
    - VO: "If your site copy feels either robotic or legally sketchy, book the 14-day fix and we'll rebuild it with this workflow—always with human approval before anything ships."

Series 3 – One Prompt, One System

Script 07 – One Prompt to Auto-Tag Every Lead Email

Platforms: Reels, TikTok, Shorts, LinkedIn
Target length: 35–45 seconds
Visual style: Screen-share of email client + small automation tool (Zapier, n8n, etc.)
Goal: Show a simple, high-ROI automation win.

Hook (0–3s)
VO: "This one prompt turns your messy inbox into a lead tracker."

Scene breakdown

1. **Scene 1 (0–7s) – The messy inbox**
    - Visual: Inbox full of "Website Inquiry," "Question," etc.
    - Overlay: "Leads hidden in here."
2. **Scene 2 (7–18s) – The AI classification step**
    - Visual: Automation step sending email body to an LLM with a prompt like: "Classify this as: New lead, Existing client, Spam, Other. Reply with JSON."
    - Overlay: "Step 1 – Classify with AI."
3. **Scene 3 (18–30s) – Auto-tagging output**
    - Visual: Show returned JSON; show tags or labels being applied in the inbox / CRM.
    - Overlay: "Step 2 – Auto-tag in your system."
4. **Scene 4 (30–42s) – Why it matters**
    - Visual: Simple view of "Leads this week: 7" dashboard.
    - VO: "Now you can see leads by day and follow up without digging. No new app, just one automation."
5. **Scene 5 (42–45s) – CTA**
    - Visual: BADGR logo + offer.

- VO: “If your leads are still stuck in the inbox, the 14-day fix includes setups like this. Tap to see the playbook.”

Script 08 – Local RAG: Ask Your Own SOPs for Help

Platforms: Reels, Shorts, LinkedIn
Target length: 45–60 seconds
Visual style: Screen-share of terminal + simple chat UI; optional webcam bubble
Goal: Show your “local RAG” idea from the manual in simple terms for owners.

Hook (0–3s)
VO: “Instead of asking the internet, ask your own firm’s playbook.”

Scene breakdown

1. **Scene 1 (0–8s) – Problem**
   - Visual: Owner staring at a mess of PDFs / SOP docs.
   - Overlay: “Too many docs. No time.”
2. **Scene 2 (8–20s) – Show local RAG chat**
   - Visual: Chat UI where you type: “What’s our intake script for new Medicaid patients?”
   - VO: “We index your existing SOPs in a private, local AI stack.”
3. **Scene 3 (20–32s) – Answer appears**
   - Visual: Chat returns the relevant script with reference to the original document.
   - Overlay: “Answer + source link.”
4. **Scene 4 (32–50s) – Explain safety**
   - Visual: Terminal showing local Ollama / Chroma running.
   - VO: “No cloud, no client data leaking. It runs on your own hardware or a locked-down server.”
5. **Scene 5 (50–60s) – CTA**
   - Visual: Offer page.
   - VO: “In the 14-day fix, we start with your website, then plan systems like this for Phase 2. Tap to get your leak scan first.”

Script 09 – How a Solo Attorney Ends Daily “Website Panic” with One System

Platforms: LinkedIn, Reels, Shorts
Target length: 60–75 seconds
Visual style: Face-forward talking head + B-roll of dashboards and email
Goal: Founder-style mini case study.

Hook (0–3s)
VO (face cam): "One solo attorney used to wake up wondering if his website was broken again."

Scene breakdown

1. **Scene 1 (0–10s) – Problem story**
   - Visual: Talking head, cutaway to inbox alerts, error messages.
   - VO: "SSL errors, slow pages, random spam leads—no idea what was working."
2. **Scene 2 (10–25s) – The system**
   - Visual: Quick montage of:
     - Weekly Lighthouse report.
     - Lead tracking sheet.
     - Simple uptime monitor.
   - VO: "We put everything into one simple system: weekly health checks, a lead log, and clear thresholds for 'something is wrong'."
3. **Scene 3 (25–45s) – Outcome**
   - Visual: Side-by-side of 'before' (chaos) and 'after' (calm dashboard).
   - VO: "Now he checks one dashboard on Monday. If it's green, he stops worrying and gets back to cases."
4. **Scene 4 (45–60s) – Tie to offer**
   - Visual: 14-day plan graphic.
   - VO: "That system started with the 14-day Lead Leak & Compliance Fix. We fixed the obvious leaks, then locked in monitoring."
5. **Scene 5 (60–75s) – CTA**
   - Visual: Close-up of CTA button on site.
   - VO: "If your mornings feel like his old ones, tap through and see exactly what we do in those 14 days."

Series 4 – Tech Myth Clinic

Script 10 – Myth: "HIPAA Means No Online Forms"

Platforms: Reels, TikTok, Shorts, LinkedIn
Target length: 30–40 seconds
Visual style: Talking head + overlay text + quick form demo
Goal: Reframe a common fear, position you as pragmatic + careful.

Hook (0–3s)
VO: "Myth: HIPAA means you can't use online forms at all."

Scene breakdown

1. Scene 1 (0–8s) – Myth statement
   - Visual: You on camera; big on-screen text "MYTH".
   - VO: "That's what a lot of clinics have been told."
2. Scene 2 (8–20s) – Reality
   - Visual: Example of a secure form on a HIPAA-aware provider (blurred branding if needed).
   - Overlay: "Reality: use the right tools + language."
   - VO: "Reality: you can use forms, but you need the right provider, security, and disclaimers."
3. Scene 3 (20–32s) – Business impact
   - Visual: Simple stat graphic: "No online form = lost inquiries".
   - VO: "No form means phone-tag and missed opportunities. Patients expect simple online intake."
4. Scene 4 (32–40s) – CTA
   - Visual: Your landing page.
   - VO: "In our 14-day Lead Leak & Compliance Fix, we audit forms, language, and vendors so you know what's safe to use. Tap to see what's included."

Script 11 – Myth: "Cheap Hosting Is Good Enough"

Platforms: Reels, Shorts, TikTok
Target length: 30–40 seconds
Visual style: B-roll of slow site + dashboard comparison
Goal: Make performance + reliability feel like a revenue issue, not a geek detail.

Hook (0–3s)
VO: "If your hosting is cheaper than lunch, your website is probably costing you cases."

Scene breakdown

1. Scene 1 (0–8s) – Slow site experience
   - Visual: Page taking several seconds to load; spinner, blank areas.
   - Overlay: "$3/mo hosting."
2. Scene 2 (8–18s) – Fast site comparison
   - Visual: Same page loading instantly on better hosting.
   - Overlay: "Serious hosting."
3. Scene 3 (18–30s) – Explain in plain language
   - Visual: Simple graphic: "Slow → bounces → fewer calls."

- VO: “Cheap hosting means unpredictable speed and downtime. Google notices. So do impatient visitors.”

4. **Scene 4 (30–40s) – CTA**
   - Visual: Your 14-day plan graphic.
   - VO: “In the 14-day fix, we test your stack and tell you if hosting is part of the leak. If it is, we map exactly how to move without drama.”

Script 12 – Myth: “AI Will Replace My Paralegal”

Platforms: Reels, Shorts, LinkedIn, TikTok
Target length: 45–60 seconds
Visual style: Talking head + screen-share of AI workflow
Goal: Calm fears, frame AI as assistive, and plug your responsible automation stance.

Hook (0–3s)
VO: “AI is not here to replace your paralegal. It’s here to stop them from retyping the same thing all day.”

Scene breakdown

1. **Scene 1 (0–10s) – Fear framing**
   - Visual: You on camera; overlay text “Fear vs Reality”.
   - VO: “Small firms hear ‘AI’ and think layoffs. That’s not the real win.”
2. **Scene 2 (10–25s) – Show assistive workflow**
   - Visual: Screen-share of an AI tool drafting a first version of a letter or summarizing a transcript.
   - Overlay: “AI drafts → Human approves.”
3. **Scene 3 (25–40s) – Concrete benefit**
   - Visual: Timer comparison: “Manual: 40 min” vs “AI-assisted: 12 min”.
   - VO: “The paralegal still decides what goes out. They just start from a better first draft.”
4. **Scene 4 (40–55s) – Your principles**
   - Visual: Bullet list on screen:
     - “No black-box decisions”
     - “Human approval before irreversible changes”
     - “Escalate when AI is unsure”
   - VO: “Our rule: AI can suggest, never silently decide. Humans keep the keys.”
5. **Scene 5 (55–60s) – CTA**
   - Visual: Offer page.

- VO: “If you want more capacity without burning out your team, the 14-day fix is step one. We stabilize your site, then layer smart automation on top.”

If you want, next step I can:

- Turn any of these into **exact teleprompter text** versions (word-for-word lines).
- Or generate the companion `ad_script_templates.md` with the two ad concepts we outlined earlier so everything is ready for Claude to drop into files.
